Getting the First Committee

One committee. Twenty donors. One afternoon.

*A companion to the technical dossier, and a different kind of document.
The dossier is written for the person being presented to.
This one is written for the person walking into a room to ask for something.*

1 September 2026

1. What the problem actually is

Everything else is finished. The loop closes, the law is respected, the tests pass, the site is live and installable. The one thing missing cannot be built: **nobody uses it**.

A panel will ask. The answer today is *nobody yet*, and that answer is survivable exactly once — if it is followed immediately by what is being done about it. This document is what is being done about it.

1.1 Why twenty is the right number

Not because twenty is impressive. Because twenty is the smallest number that turns every architectural claim in the dossier into evidence.

With twenty real donors in one wilaya, a request posted at nine in the evening reaches people who can actually answer it. Without them, the same request reaches nobody and proves nothing. The application does not become true at a thousand users. It becomes true at the first one who receives a notification and goes.

1.2 Why it is not as hard as it sounds

You are not recruiting twenty strangers. You are asking one person who *already has a list* to point it at something. The Croissant-Rouge committees, the university clubs and the scout groups have been organising blood donation in Algeria for decades. None of them lacks donors. What they lack is a way to reach the right ones on a Tuesday night.

2. Who to ask

Who	Why them
1 A wilaya committee of the FADS	The Fédération Algérienne des Donneurs de Sang is a federation of blood-donor associations with local committees. Its entire reason to exist is donor lists — which is the one thing this needs. The ANS names it first among its association partners.
2 A university blood-donation club	The shortest distance if you are a student. The president already has a group of donors on their phone, and nobody has to ask a head office. Fastest yes on this list.
3 A local Croissant-Rouge committee	Carries the most weight in front of a panel, and the ANS lists the CRA as a collection partner in writing. Slower: somebody must say yes on the organisation's behalf.
4 Scouts Musulmans Algériens	Also named on the ANS partnership page, and historically active in collection drives. Real lists, real trust, little bureaucracy.
5 A Facebook blood group	By far the most donors, and the least institutional weight. Useful for numbers, weak as a story.

Two different firsts. FADS is the best fit; a university club is the fastest yes. Ask both — a club that says yes this week is a reference when you go to the committee next month, and neither call costs anything.

2.1 None of this is a novel request

The ANS publishes a page listing the associations it already collects blood with: the FADS, the Scouts Musulmans Algériens, the Croissant-Rouge Algérien, Irchad wa Islah, the Rotary and Lions clubs, the UNJA and several others. Some of those partnerships are dated on the page and go back to 2015.

That matters twice. It means an association hosting a collection is ordinary rather than exceptional, so you are asking for something the organisation already does. And it means the premise this product is built on — that associations are the right partner for reaching donors — is the agency's own practice, not an assumption you made.

3. What the ANS already publishes

Before contacting anybody, three things are public and worth having in front of you. The site is served over `http`; `https` currently fails on an expired certificate, so a browser may refuse it.

Page	What is on it
<code>/centres-collectes-fixes/</code>	A national directory: 165 transfusion structures across all 58 wilayas, each with a telephone number. Nearest to Draria: CTS CHU Douéra 023 12 46 35, CTS CHU Beni Messous 023 11 32 23, CTS CHU Mustapha 021 23 66 64.
<code>/programme-de-collectes-mobiles/</code>	A mobile-collection programme published per wilaya. Dated 2025 at the time of writing, so check whether the year has turned over before relying on it.
<code>/associations-donneur-sang/</code>	The partnership page named above. Worth reading before any meeting: it tells you what the agency already does and with whom.

Agence Nationale du Sang — (+213) 023 53 32 79 / 76 / 74, 15 route du Kadous, Tixeraine, Bir Khadem, Alger. The number is printed on the back of their mobile collection units.

4. Where to go: a blood drive

This is the single highest-yield place in the country for what you need, and the reason is simple. **Everyone at a blood drive has already said yes.** They are willing, they are present, and they are standing still.

You get the committee and the donors in the same room on the same afternoon. Nowhere else does that.

4.1 What to bring

- A phone with the app installed to the home screen, signed in.
- The invite code shown full screen — **Committee** → **Invite your donors** → **the QR button**. Hold it up, or hand the phone over.
- The same page printed on A4, taped to the table. The print button on that screen produces exactly this sheet and nothing else.
- Nothing to sign, no forms, no laptop.

The code has no letter O, no digit 0, no l and no 1 — it was designed to be read aloud across a table when somebody's camera will not focus.

5. What to say

5.1 The opening

Do not begin with the application. Begin with the thing they already know is broken.

"When you need O negative on a Thursday night, what do you actually do?"

Let them answer. They will describe ringing round, or posting on Facebook, or a WhatsApp group that half the members have muted. That answer is the product's whole reason to exist, and it is better coming from them.

5.2 The ask, which must be small

The mistake is asking somebody to adopt a platform. Ask for an afternoon.

"Can I put a code on your table for one afternoon? The people who scan it become a list you can call — and the app knows their blood type and the date they are allowed to give again."

They commit nothing. They install nothing. They keep the list.

5.3 What is in it for them, said plainly

"Next time you need a specific type, you press one button. Only donors in your wilaya, only compatible types, only the ones eligible today — and never the family who posted the request. Then you see who is coming."

That last sentence is the one that lands. Nothing they use now tells them who is coming.

6. How much to say

The worry is natural and worth answering honestly: what stops somebody taking the idea?

6.1 The idea is not the asset

Four applications already match blood donors in Algeria and one has ten thousand installs. Nobody needs to steal the concept of connecting a donor to a request — it is already taken, four times over, by products that do it badly.

What none of them has is the consent record with the version of the text shown, the reveal log nobody can delete, the compatibility table checked from both directions, the vouching model, and the assertions that hold all of it in place. That is months of work, and it cannot leave a room inside somebody's memory.

6.2 And the repository is public

Worth knowing before a meeting rather than during one: the code, this document and the technical dossier can all be downloaded by anyone, without an account. That was the right choice — an argument nobody can check is a brochure — but it means secrecy is not what is protecting this work. The work is.

6.3 The line that does exist

Say freely	Never hand over
What it does and who it is for	Database credentials or admin access
That it is built, and that nobody uses it yet	Any donor's name, number or blood type
How consent and the reveal log work	A copy of the database
That you are looking for one pilot	Anything you have not read, signed

6.4 “What exactly is it?”

Not vague — scoped. Nobody standing at a folding table wants the schema, for the same reason a patient does not want pharmacokinetics. Two sentences, both entirely true, and both leaving them somewhere to ask a second question from.

“C’est une application qui aide les comités à joindre les bons donneurs au bon moment — le bon groupe sanguin, dans la même wilaya, et seulement ceux qui sont éligibles ce jour-là. Le comité garde sa liste, et les numéros restent protégés.”

تطبيق يساعد اللجان على الوصول إلى المتبرع المناسب في الوقت المناسب: الفصيلة المطابقة، في نفس الولاية، ومن هو مؤهل للتبرع اليوم. القائمة تبقى عند اللجنة، والأرقام محمية.

6.5 “Does it actually work?”

There is a temptation to answer no — to call it a prototype that is not finished, because it lowers the stakes and explains why you are asking questions. Resist it, for two reasons.

It is not true. It works, it is deployed, and you are carrying it. If you say it does not and then hold up a working screen ten minutes later, you have contradicted yourself in front of the one audience whose trust the entire project depends on — and every other careful thing you said becomes worth less.

And it is the weaker ask. Nobody gives an afternoon to something that does not exist yet. *“It works, here it is, will you try it”* is a smaller request than it sounds, and a far better one.

The honest answer keeps everything you wanted from the modest one:

“Oui, elle fonctionne — mais personne ne l'utilise encore. C'est justement pour ça que je viens vous voir : je préfère savoir ce dont vous avez besoin avant d'aller plus loin.”

نعم، التطبيق يعمل — لكن لا أحد يستعمله بعد. لهذا جئت أسألكم: أفضّل أن أعرف ما تحتاجونه قبل أن أكمل.

Humble and accurate at once. “Nobody uses it yet” is the honest weakness and it is also the invitation — it is precisely what you are asking them to change.

7. The questions you will be asked

Answer these plainly. The weak answers are the defensive ones.

“Who are you?” A student who built this, alone, and is looking for one committee to try it. Do not inflate this. Nobody is offended by a student with something that works; several people are offended by a student pretending to be a company.

“Is this official? Approved by the Agence Nationale du Sang?” No, and say so immediately. It is built to the law — consent recorded per purpose, every contact reveal logged, no payment to donors ever — but nobody has approved it. Then add the true thing: the ANS publishes a page of the associations it collects blood with, and what is being proposed is that your committee works the same way it already does, with a tool that remembers who gave and when. Claiming an endorsement you do not have is the one mistake that cannot be recovered from; pointing at their own published practice is not claiming one.

“What happens to our donors’ phone numbers?” They stay with the donor. Search shows a masked number; opening one is a deliberate act, restricted to members of an association in that wilaya, and every opening is written to a log the donor can read and *nobody* can delete. You can show them this on the phone.

“Are you taking our list?” No, and this is worth being precise about. There is no upload. Each donor signs up themselves and consents themselves; the code only records that they came through your committee. If they walk away tomorrow, the list is still theirs, because it was never yours to take.

“We already have a Facebook group.” So does everyone, and it works until it does not. A group post reaches whoever is scrolling, cannot tell A+ from O—, does not know who gave blood six weeks ago and cannot be closed when the need is met. This does all four.

“Who pays for this?” Nobody, today. Donor payment is excluded by Algerian law and by the design — there is no charge to a donor and there never will be. Long term it is paid for by the bodies that coordinate donation, or by public funding. Say that it is unsolved rather than inventing a business model in front of somebody who will remember.

“What if it stops working?” Then they are exactly where they are now, with a phone and a list. Nothing they do today is taken away.

8. On the day: the mechanics

Ten minutes, and none of it needs a laptop.

Step	
1	The committee’s representative signs up in the app like anyone else.
2	They apply as an association: Committee → Apply . Name, type, wilaya.
3	You verify them. You are the platform administrator, and verification is restricted to that role on purpose — a badge anybody could issue is not a badge.
4	They open Committee → Invite your donors and create a link. Give it a name they will recognise later, like the date of the drive.
5	Press the QR button. Hold up the phone, or print the sheet and tape it down.
6	Each donor scans, signs up, chooses their blood type, and is on the list. The count on the committee’s screen goes up as it happens.

Creating a link is restricted to an administrator of that association, because it publishes a standing invitation under the committee’s name. Volunteers can see everything and create nothing.

9. Three calls to make this week

Everything up to here is preparation. These are the calls, written out, because the hard part is not knowing what to say — it is saying it the first time.

Each one asks a small, real question. None of them opens by pitching.

9.1 Call one: your nearest transfusion centre

CTS CHU Douéra, **023 12 46 35**. A few minutes from Draria, and they know which associations collect there.

"Bonjour, je suis étudiant à Draria. Je travaille sur un projet autour du don de sang et je voudrais savoir quelles associations organisent des collectes chez vous, et s'il y en a une prévue prochainement. Est-ce que vous pourriez m'orienter ?"

السلام عليكم. أنا طالب من الدارارية، أعمل على مشروع حول التبرع بالدم. أردت أن أسأل: ما هي الجمعيات التي تنظم حملات التبرع عندكم، وهل هناك حملة قادمة قريبًا؟

You are not selling anything on this call. You are finding out who the local associations are — which is the list you actually need, and which is not published anywhere.

9.2 Call two: the ANS

023 53 32 79. Tixeraine, Bir Khadem — a few kilometres from you, but call before going.

"Bonjour, je suis étudiant à Draria. Je cherche le programme des collectes mobiles pour la wilaya d'Alger. Le site affiche encore l'année 2025 — est-ce qu'il existe une version à jour, ou une page où les collectes sont annoncées ?"

A question they can answer in one sentence, about a page they publish themselves. If the conversation opens up, then say what you are building — not before.

9.3 Call three: a mosque or a local association

You already know one works: a collection ran in Baba Hassen during Ramadan, after the tarawih. Mosque collections recur, and Ramadan and the summer are precisely when the ANS says donations fall.

السلام عليكم ورحمة الله. أنا طالب من الدارارية. رأيت حملة للتبرع بالدم هنا في رمضان، وقد طوّرت تطبيقًا يساعد على الوصول إلى المتبرعين حين تُطلب فصيلة معيّنة. طلبي بسيط: هل يمكنني وضع رمز استجابة سريعة على الطاولة في الحملة القادمة؟ من يمسحه يصبح ضمن قائمة يمكنكم الاتصال بها عند الحاجة، والقائمة تبقى عندكم.

"Je suis étudiant à Draria. J'ai vu qu'une collecte a eu lieu ici pendant le Ramadan. J'ai développé une application qui aide à joindre les donneurs quand un groupe sanguin précis est nécessaire. Est-ce que je peux poser un QR code sur la table lors de la prochaine collecte ? Ceux qui le scannent deviennent une liste que vous pouvez appeler — et la liste reste chez vous."

9.4 If they ask what it costs

“Rien. Ni pour vous, ni pour les donateurs. Le don de sang est bénévole et le restera — c’est la loi, et c’est aussi le principe de l’application.”

10. What to ask Douéra

One principle carries this whole call, and it protects the idea by accident: **ask how they work now, never about your solution.**

Somebody describing their own week is relaxed and detailed. Somebody being asked to evaluate a stranger’s app is guarded, polite, and useless. And a question like *“would you use an application that...”* teaches them your idea while teaching you nothing — they will say yes to be kind, and you will have given away the plan in exchange for a lie.

Everything below asks about their work. None of it mentions software.

10.1 If they ask why you want to know

“Je fais une étude sur le don de sang pour un projet universitaire. J’essaie de comprendre comment ça se passe réellement — pas ce qui est écrit dans les documents.”

True, modest, and it makes them the expert. People help students. Very few people help salesmen.

10.2 The questions, in this order

Start wide and harmless. The valuable ones are in the middle, and by then they are talking.

Ask	Why
1 “Vous faites des collectes mobiles, ou seulement sur place ?”	Warm-up
2 “Quelles associations organisent des collectes chez vous ?”	The list
3 “Il y en a une prévue prochainement ?”	A date
4 “Quand il vous manque un groupe rare en urgence, vous faites comment ?”	The heart
5 “Vous avez une liste de donateurs que vous pouvez rappeler ?”	Does it exist
6 “Vous les contactez comment — téléphone, Facebook ?”	The channel
7 “Ça arrive souvent qu’un groupe manque ?”	Frequency
8 “Les donateurs reviennent, ou c’est surtout des premières fois ?”	The 22%
9 “Qui s’occupe des associations chez vous ?”	A name
10 “Je peux vous rappeler si j’ai d’autres questions ?”	A second call

10.3 Question four is the one

“Quand il vous manque un groupe rare en urgence, vous faites comment ?”

عندما تنقصكم فصيلة نادرة بشكل عاجل، كيف تتصرفون؟

Everything this project assumes is contained in the answer to that one sentence, and you did not put any of it in their mouth. If they describe telephoning down a list for two hours, or posting on

Facebook and waiting, you have just confirmed — from a transfusion centre, in their own words — the problem the dossier argues from national statistics.

Say nothing after they answer. Let the silence sit. People fill it with the part they were not going to tell you.

10.4 Question eight quietly checks the ANS

The agency says only 22% of Algerian donors give regularly and calls that figure *“relativement faible”*. That number is the foundation of the whole argument. Asking a centre whether their donors come back tests it against one real place — and if Douéra says most people give once and vanish, you are no longer quoting a statistic, you are reporting something you were told.

10.5 What not to ask

- **“Est-ce que vous utiliseriez une application qui...”** — teaches them the idea, and buys a polite yes that means nothing. Never ask anybody to predict their own behaviour.
- **Anything that sounds like criticism.** “Pourquoi vous n’avez pas de système ?” makes them defend the centre instead of describing it.
- **For any donor’s details.** Not a name, not a number. Asking would undo the one thing that makes this project different, on the first call.
- **For a decision.** This call ends with information and possibly a name. It does not end with a yes, and reaching for one costs you the second call.

10.6 Write it down while they talk

Five things, and the third is worth more than the rest together.

1. Every association named — this is the list that exists nowhere online.
2. The date of the next collection, if there is one.
3. **Their exact words** for what they do when a type is missing. Write the sentence, not a summary of it. A line quoted from a transfusion centre is worth more in front of a panel than any figure in the dossier, because every other team will have figures and none of them will have spoken to anyone.
4. Whether donors come back, in their answer to question eight.
5. The name of whoever you spoke to, and the name they gave you for associations.

If the call gives you nothing but item three, it has paid for itself.

11. What success looks like

In order, and the second matters more than the first.

1. **Twenty donors on one committee’s list.** The count is on their screen; no spreadsheet needed.
2. **One real request, answered.** A family posts, compatible donors are notified, somebody says they are coming, and the committee watches it happen. That is the entire product, and once it has happened once it has been proven.
3. **A number you did not have before.** The committee screen reports how many requests reached a donor and how long the first one took. Today, on the demonstration data, it reads

1 of 4, 38 hours. In a real wilaya with real donors it should read minutes — and if it does not, that is worth knowing more than any feature.

12. What not to do

- **Do not promise a partnership you do not have.** Not with the Croissant-Rouge, not with the ANS, not with a hospital. One checkable exaggeration discredits every honest figure you have.
- **Do not ask them to install anything.** A link, scanned, opening in a browser. Anything heavier and half the room stops.
- **Do not demonstrate the sign-up with a real phone number that is not yours.** The demonstration build accepts one fixed verification code, which means anybody can claim any number. Use your own.
- **Do not collect names on paper “to enter later”.** The entire argument is that nobody uploads anybody. Breaking that at the first drive would be worse than getting no donors at all.

Companion document: Qatra — Technical and Strategic Dossier, which carries the evidence, the regulatory position and the demonstration script. Repository: <https://github.com/2him29/startup-idea> — demonstration at <https://2him29.github.io/startup-idea/>
